Supported screen sizes

Large desktop - 1920 x 1080

Small Desktop - 1366 x 768

This document provides information on the new features, enhancements, improvements and bug fixes for this release.

The main objective of this release is to deliver and implement charting improvements based on the customer feedback and improve user experience around reporting and analysis.

New Features

- Enhanced Charting

We have added a number of improvements to our charting capability.

- Additional widget sizes:

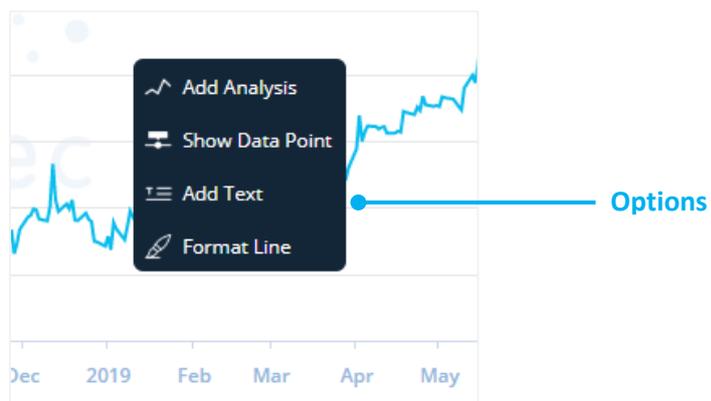

We have given you additional widget sizes for line charts, so instead of the standard square sizes 2x2, 4x4 and 8x8, you can visualise data via our rectangular widgets, or a new 3x3 or the largest 10x10 size.

Additional widget sizes

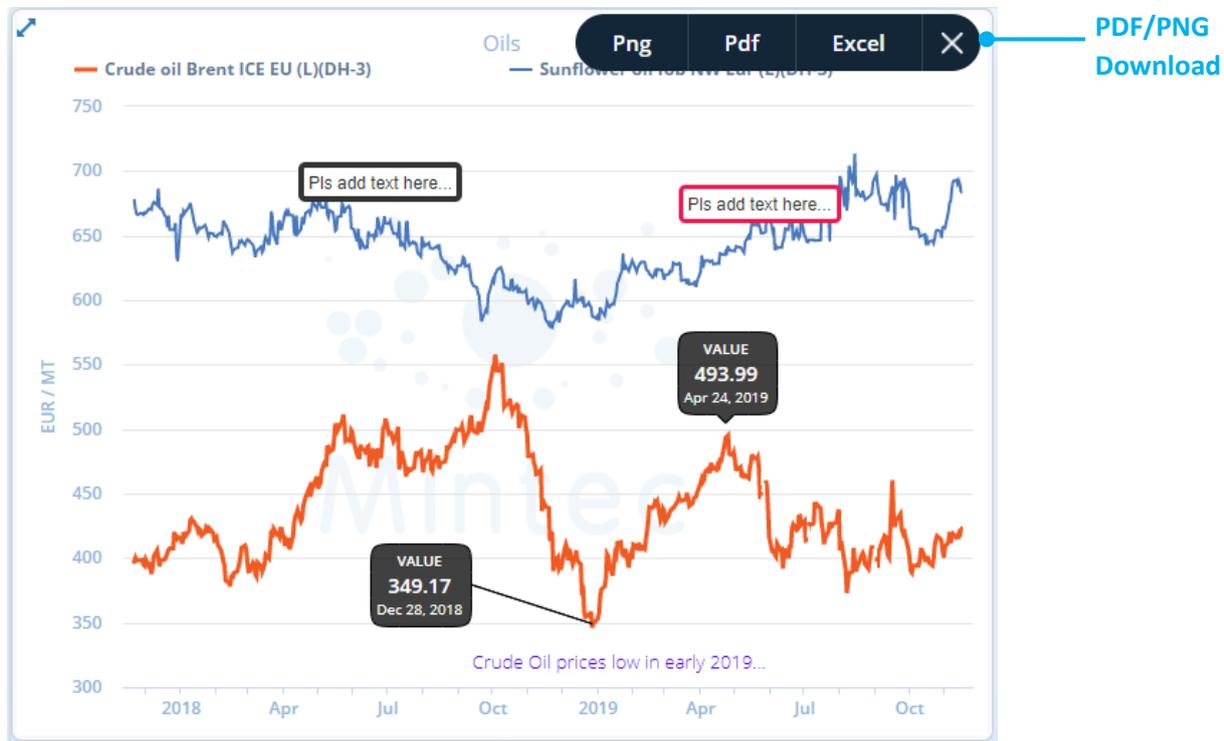

You also have the ability to customise and add detail to your Model, Commodity and Customised dashboards, to emphasise certain points. The context menu includes below options:

- **Line formatting:** changing the width of the chart line and/or the colour, to give greater variation.
- **Adding a text to chart:** adding and editing of free text boxes with the ability to position them accordingly, to add information or notes to the chart.
- **Pinning a value to chart:** instead of just hovering over the graph to see a data-point, you can now pin several data-points (value and date) to your chart to add emphasis.

- The existing export options of **PDF and PNG** at dashboard level have been added to widgets so that you can now opt to download individual widgets.

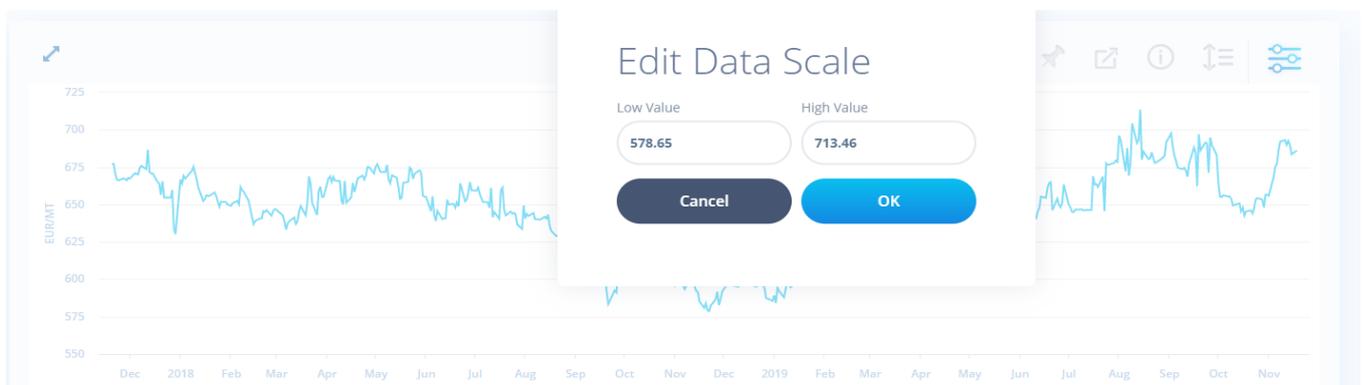

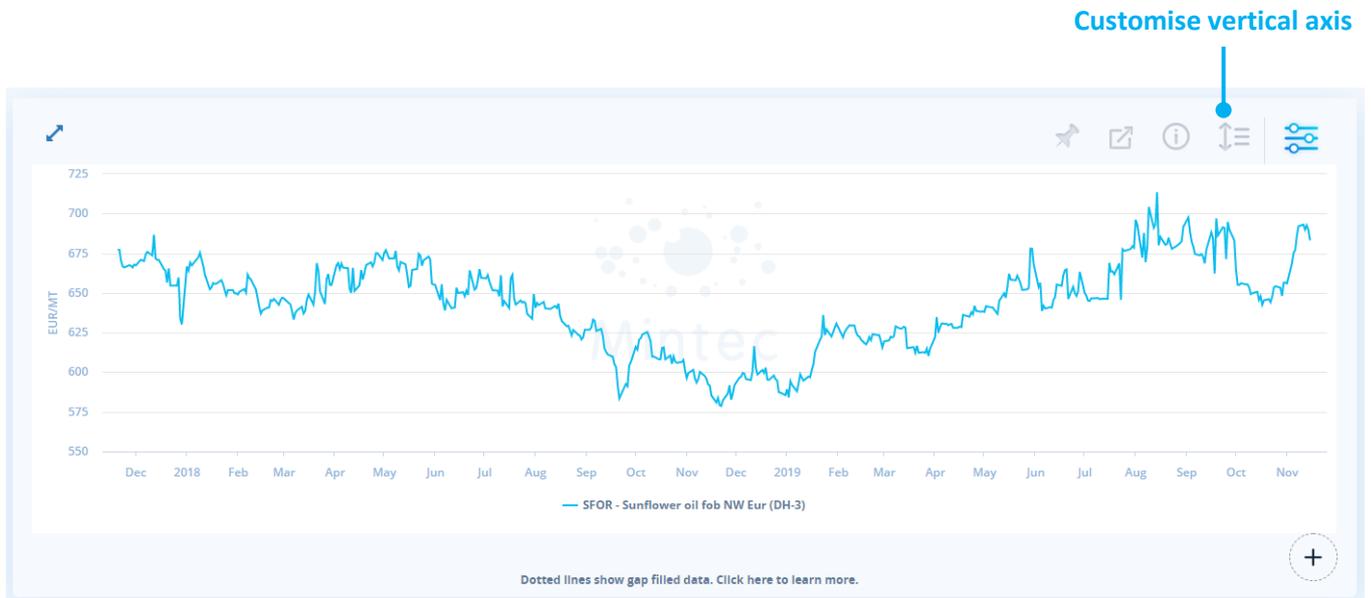

- A **zoom function** has been added to Commodity and Model dashboards, and to specific types of widget within your Customised dashboards, allowing you to view your charts in full-screen mode, giving better visibility of the detail. The Zoom icon is located in the top left corner of your dashboard/widget.

- We've **increased the font size on the Value widget** to give better visibility. The following shows the previous Value widget, followed by the improved:

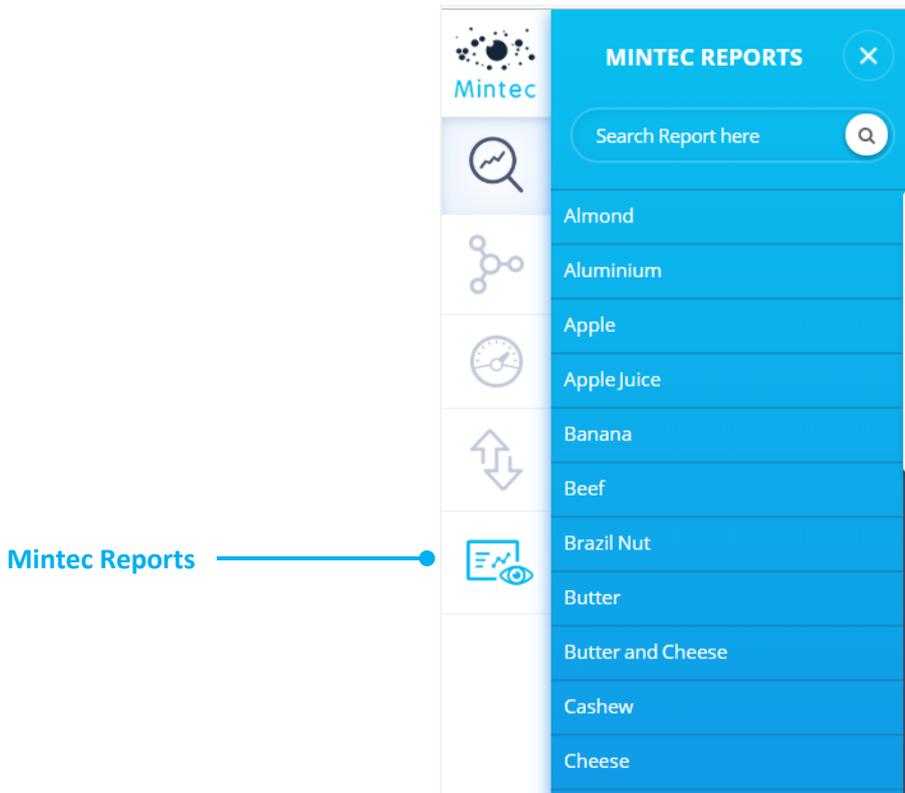

- A new option to **customise the vertical axis** on your dashboard / widget has been added and allows for a low and high value to be input for the range of the 'Y' axis. This improvement accommodates the dual -axis option also, where two independent ranges can be entered. An icon to 'Edit Data Scale' has been added to the Commodity/Model dashboards alongside the existing dashboard functions. For Customised dashboards, the icon has been made available on particular widget types when accessing a dashboard in Edit mode.

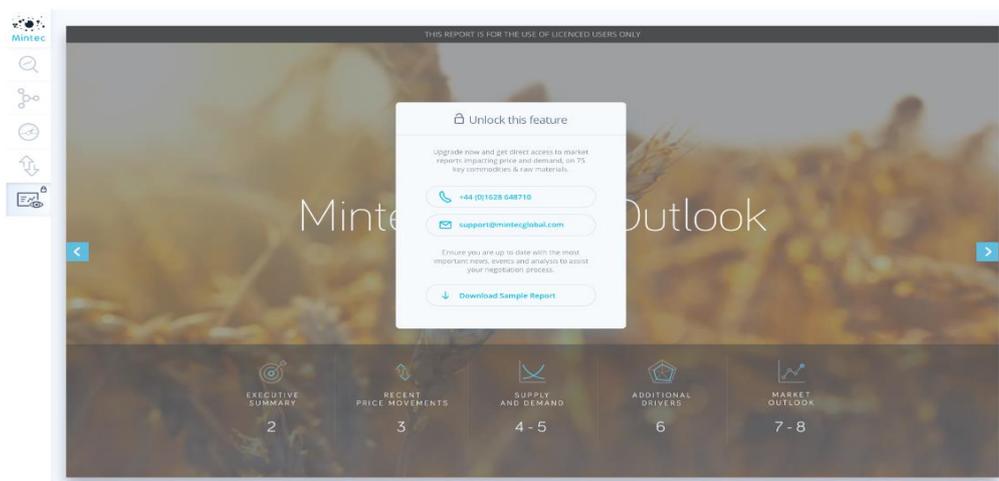

- Mintec Reports

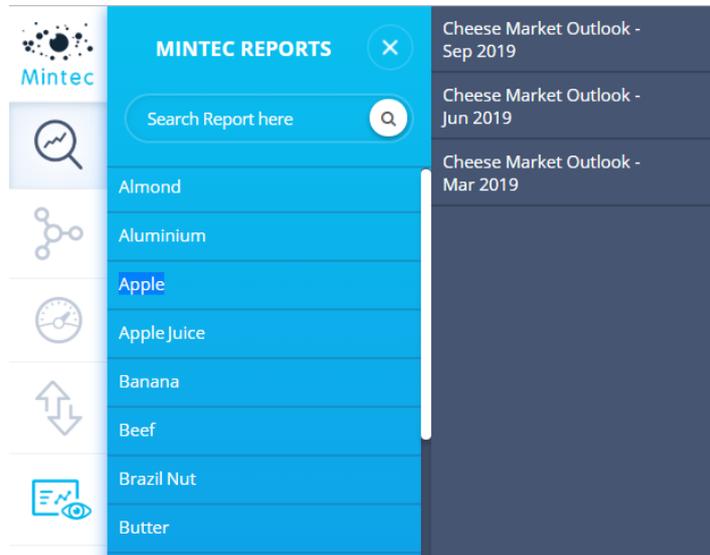

A new icon has been added to the left side bar in the Mintec Analytics platform. The purpose is to provide improved accessibility to **Mintec Reports** via the platform and will be available to Premium customers.

The icon will be visible to all users of the platform but for non-Premium customers, the icon will show a 'lock' and a teaser will be shown if the user tries to select this function.

The Mintec reports currently available are Market Outlooks and Macroeconomic reports – clicking on the icon will present you with a list of all the reports available, in alphabetical order, and by selecting a topic from the list you will see all the related reports published with the latest at the top.

A button at the foot of the list will allow you to view the latest annual publication schedule for Mintec reports.

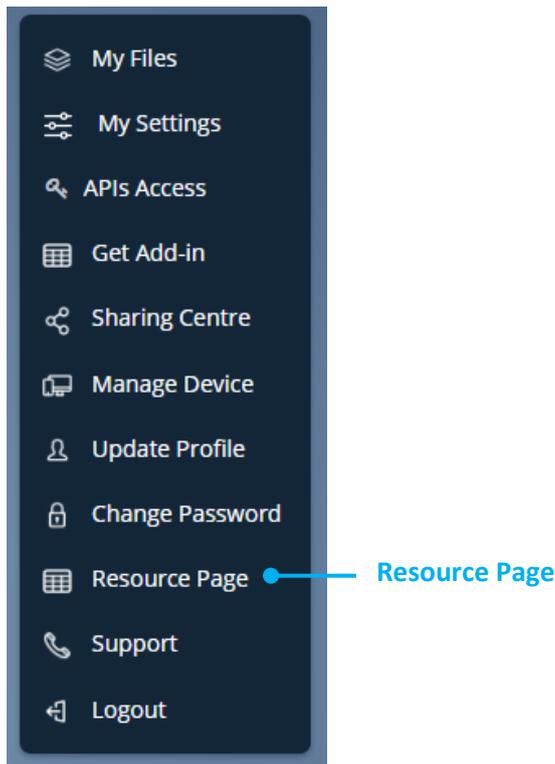

Enhancements/Improvements

Enhancements/improvements delivered on the Mintec Analytics platform.

- 'Resource Page' link added to Profile menu

This is to provide easier access to our available resources, documentation on the company web page.

Bug Fixes:

Bug #1: Share Dashboard not keep the schedule of origin dashboard. This has been fixed. Setting a schedule at dashboard level, sharing the dashboard with User2, User2 accepts share and sees the same schedule.

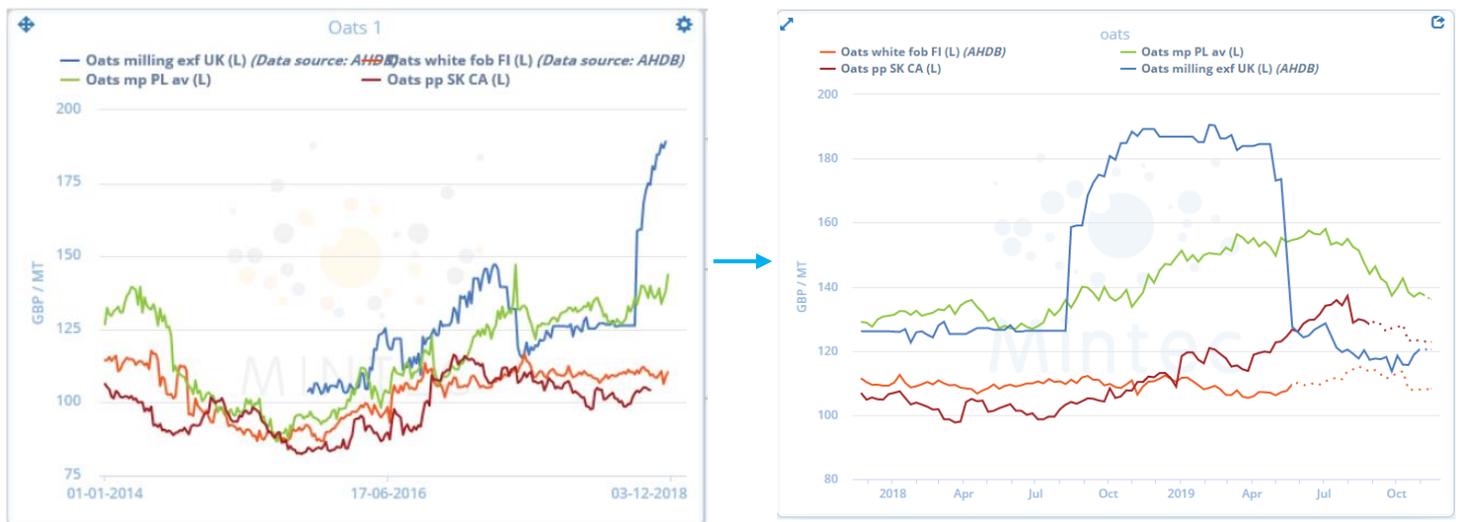

Bug #2: On the Negotiation Pack download, if Insight extends over one page then it overlapped the disclaimer in the footer. This has been fixed.

Bug #3: Unable to deselect 'Annotation' checkbox on Seasonality widget. The user can now deselect the Annotation text box.

Bug #4: Annual series conversion issue. When annual series is converted from one currency to another, the graph appears to be blank. This issue has been fixed.

Bug #5: Series descriptions text overlaps in line chart widget where data source information is shown. This has been fixed.

Known Issues:

Issue #1: Known limitation for Zoom functionality on IE11

Chart viewed in full screen mode on IE browser does not zoom to full screen. This is due to technical limitation and planned to resolve in future version of Mintec Analytics.

Issue #2: Pinned values and text boxes can be dragged off the charted area

Sometimes pinned values and text boxes can be dragged / dropped off the charted area. This is planned to improve this in future version of Mintec Analytics.
