Supported screen sizes

Large desktop - 1920 x 1080

Small Desktop - 1366 x 768

This document provides information on the minor improvements and bug fixes for this maintenance release. The release does not include any new feature however intended to solve some minor improvements.

Enhancements/Improvements

Enhancements/improvements delivered on the Mintec Analytics platform.

- Data improvements

- Frequency change - Mintec will deliver for example data weekly instead of monthly for some commodities e.g. South African fruit and Veg commodities; peppers, pear, apple, asparagus, avocado, banana, sprout, blueberry, cherry, clementine etc.
- Accuracy has been improved on some data series.

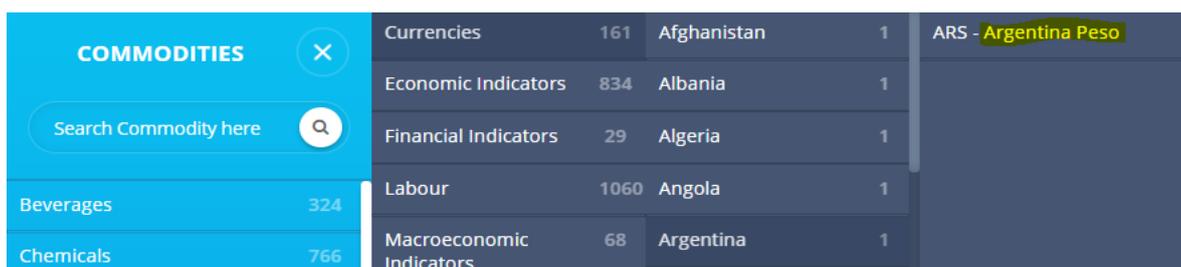

- Taxonomy Improvements

Minor improvement has been made to the taxonomy to give more consistent experience, e.g. Wool series from Australia. In example below, the series now been combined into single geography Australia.

- UI improvement

Inconsistencies with the currency name for the currency series have been removed and it will now be country and currency on the taxonomy and chart e.g. Argentina Peso, instead of Argentinean Peso

• Analytics tab improvements

Drivers Tab

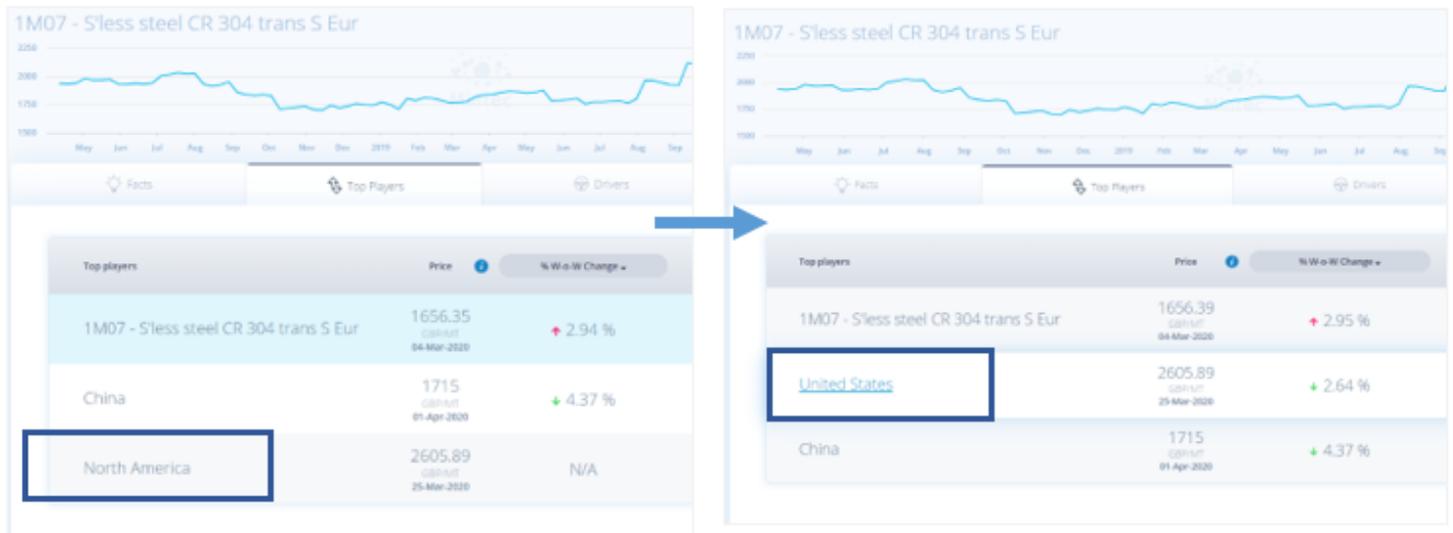

New regions / geographies have been introduced to improve Drivers feature, making the information more specific. Example can be seen with the following series: 1K06 – Steel CR coil dom exw S Eur

Previously, 1K06 would show the European Union drivers, however, we have now specified it to show Italy – which is the representative country for South Europe.

Top Players

As part of geographies improvements, some of the Top Players may look different, e.g. IM07, earlier it used to show North America as a Top Player, whereas now it will be United States. This was mainly done to match the Facts tab and give consistent experience across other Analytics tabs.

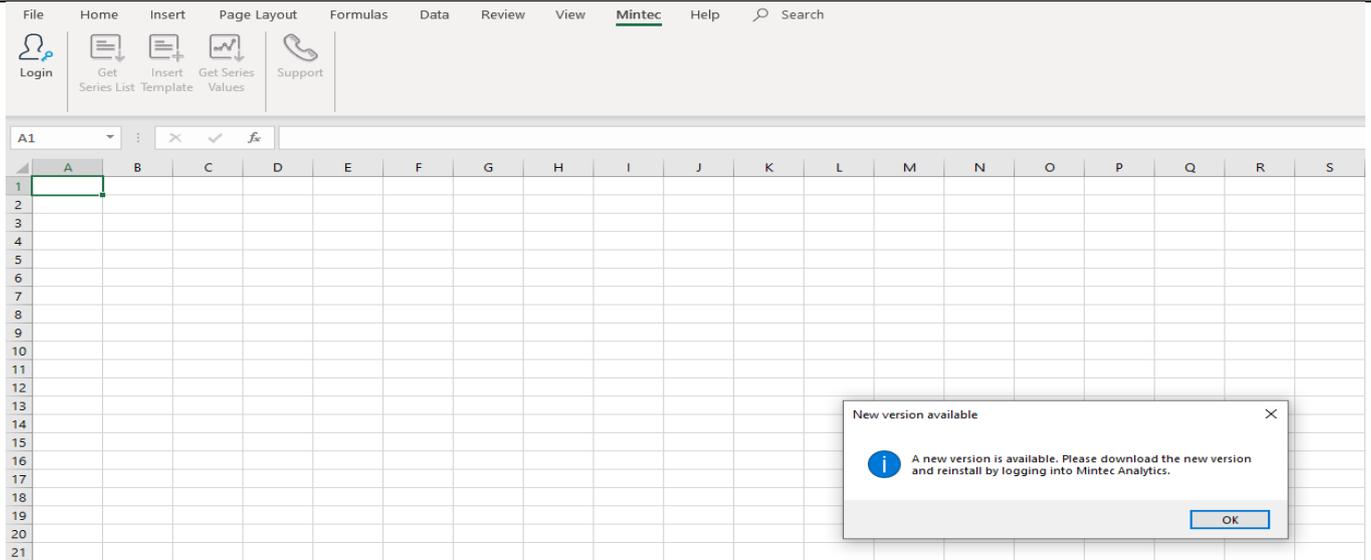

Weather Improvement

You can now see cropped weather maps for regions rather than a full EU weather map e.g. WHTG – shows a cropped EU map

- Excel Add-In

New version of Excel Add-In (1.0.0.56) is now available to address issue with locale.

When you next login on Excel Add-In, notification about new version is displayed, see screen shot below. You can continue to work with existing version or install the new version from Mintec Analytics.

• Mobile App

No new feature or improvements added to Mobile app. However due to version compatibility with Mintec Analytics changes you will need to install new version to be able to use the Mobile App without any errors.

Bug Fixes:

Bug #1: No Scroll bar on Burst edit function. This is been resolved. The scroll bar has been added where the cost model has large number of model components.
